Electronic Medical Records.....

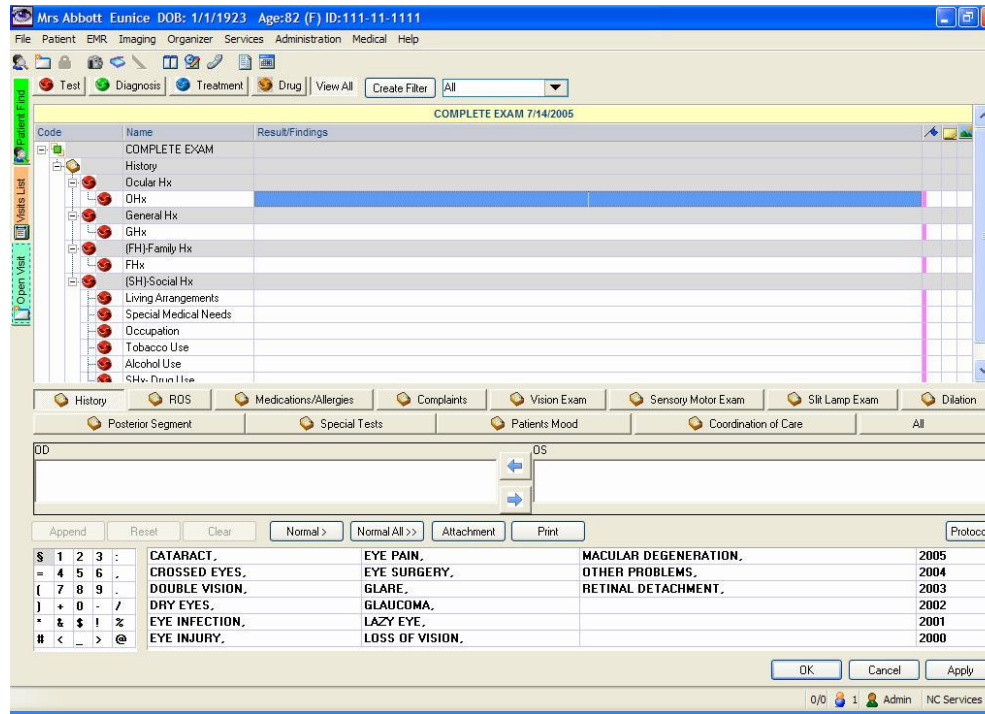

..... Written Just For You

For a Clear View of Your Patient's Record

Envision effectively consolidates the technology of Electronic Medical Records with the specific needs of the optical-related practice since the product was designed and written exclusively for ophthalmology, optometry and associated sub-specialties.

Users of Envision can look forward to improved personal productivity, increased coding accuracy in addition to a strong return on investment.

- ◆ **Bilateral format** accelerates the speed of examination data input as well as makes for easier viewing of displayed data.
- ◆ **Direct interface of ophthalmic devices** provided through standard video, web or network interfaces.
- ◆ **Coding at highest level** for maximum reimbursement through the use of the E&M Coding Adviser.
- ◆ **Annotate captured images** as well as template images with Envision's Smart Image Annotation Tool.
- ◆ **Wireless access** via laptops or pen-based tablets provide a new degree of freedom and flexibility for the provider.

Patient's electronic medical record provides tabs for quick and easy access to user-defined areas of interest. For example:

- ◆ Demographics
- ◆ History
- ◆ Medications
- ◆ Diagnosis
- ◆ Treatment
- ◆ Complaints
- ◆ Vision Exam
- ◆ Dilation
- ◆ Slit Lamp Exam

Captured images (image modalities) along with template images can be annotated using Envision's Smart Image Annotation Tool.

In supporting all aspects of annotation, Smart Image complies with Ophthalmic Drawing Classifications.
